# Administrative Notes

- DPM #3: Low-fi prototype studio 10/30
- Midterm team feedback form
- Looking ahead: DPM #4 – What should be implemented?
  - Your project should be **actually useful** to (a small number of) real users.
  - For each project, what needs to be implemented to accomplish this goal will be different.
  - Focus on **high quality implementation on your core tasks**, and **minimum functional implementation for other necessary features**.
  - Be very careful in DPM #3 to **only promise what you can actually accomplish!** A small, well-designed project is better than a huge, poorly implemented one.
